LMRconnectIT | AlertIT

Optimizing education
campus efficiency,
compliance and safety

Cistera LMRconnectIT is used to dramatically improve the **safety and security** of students, staff and visitors across school, college and university campuses by enabling push to talk between existing radios and phone networks, opening up broadcast and LMR recording capabilities.

Previously phone and radio capabilities did not work together. Now with Cistera LMRconnectIT – these systems can operate as peers in your organizations communication infrastructure

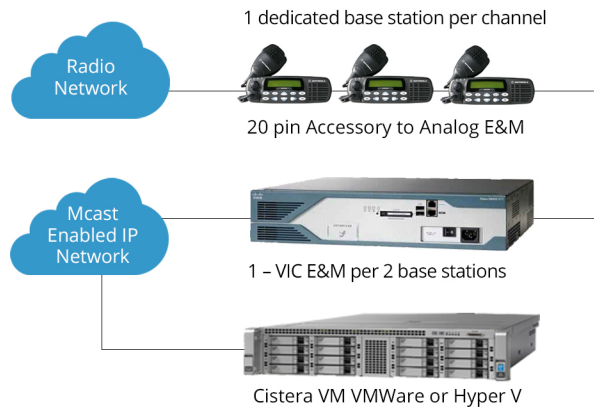

Your current radios and phones can communicate directly with each other through 'push to talk' functionality.

In addition your radio traffic can now be recorded and analyzed to improve safety and operating efficiencies.

Optimizing education campus efficiency, compliance and safety

LMR Network

This diagram shows the components of the LMR recording setup including base stations for each monitored channel, Cisco ISR and the Cisterra VM platform. Refer to configuration guide for additional details.

The Cisterra Suite delivers critical options to Campus Police and EMS teams including 911 call alerts to dispatch, all-channel LMR (2-way radio) Recording, EAN Paging and Alerts and full Call Recording capabilities.

the cisterra suite

Realtime Communications Intelligence - voice recording software with screen capture for some or all calls on all devices 100% of the time

cirrus

The Cisterra Suite is built on the Cirrus platform providing security access and authentication, network management, UC platform integration, centralized device management and administration

AlertIT is a feature rich tool for broadcast and scheduling within public facilities also providing alerts and situational awareness to first responders

Analyze performance integrating The Cisterra Suite with Microsoft Power BI, dynamic speech analytics and reporting tools

LMRconnectIT integrates radio communications with existing Unified Communications platforms keeping field teams connected at all times
