

## Fully integrating LMR into Unified Communications platforms

### LMRconnectIT LMRrecordIT

LMRconnectIT incorporates the essential capabilities of continuous recording, live monitoring and reporting delivering robust compliance and quality assurance.

#### *Bringing LMR into the UC Cloud*

Cistera's LMRConnectIT bridges frequencies across a wide spectrum. For example, it can bridge VHF (very high frequency) and UHF (ultra-high frequency) to become *one large networked frequency*. Cistera's LMRconnectIT can bridge wide-area networks into a single channel offering the unique option to converge a multiple 2-way radio system with a Unified Communications platform providing a full capture mechanism to support quality assurance and compliance requirements.

#### *Why is bridging so important?*

Different public safety departments can merge radio networks and as needed, record any or all conversations. In a crisis, various emergency first responder departments have the ability to communicate and unify action plans. System administrators can rapidly bridge channels, in a few keystrokes, for an emergency then return them to their original state afterwards.

**Listening, recording and alerting throughout your entire organization. Cistera's LMRconnectIT integrates your land mobile radio (LMR) environment into your Unified Communications platform**

**74%**

**of Cistera clients reported increased efficiency within 12 months of installing The Cistera Suite**

## Listening, recording and alerting throughout your entire organization

### LMRconnectIT LMRrecordIT

LMRconnectIT
Complete radio interoperability, continuous recording, live monitoring and reporting
Bridging between IP, Analog, Mobile Phones and 2-Way Radios
Record multiple channels on a single hardware platform
Recordings easily downloadable for training and compliance
Permission-based access limits downloads of wav files by authorized users
Multiple Channel Bridging between agencies - on-site and remotely - 10 channels per group
System Administrators can bridge quickly between agencies then return to original configuration in seconds
Bridge VHF (very high frequency) and UHF (ultra-high frequency) to become one large networked frequency
Management controls ensure hard disk space is always available
Multi-cast recording and conferencing over local and wide area networks
Can be integrated directly into 911 emergency calls for real time security response
Call slice - share a snippet of call with other users
Tone insertion - add tones to signify call recording - required in certain jurisdictions
Manually or automatically tag calls based on pre-determined criteria
All of the features of Cistera RecordIT
Easy integration into Cistera's AlertIT - event alerting and notification solution
Comprehensive reporting tools with Cistera AnalyzeIT

### LMR UC integration across the globe:

Federal, State and Local Government

Defense Department

First Responders, Police, Fire and Hospital Campuses

Colleges and High Schools

Energy Resources

Manufacturing

Stadiums & Events
